

RISE Release 2.1.0

October 1, 2020

Release Description

RISE Release 2.1.0 is a minor release. It addresses 21 issues, including three bug fixes and one enhancement to the RISE website and 17 improvements to the internal Data Administration User Interface. Bug fixes on the RISE website consisted of fixing multiple problems with the CAPTCHA on the Contact Us page, fixing errors with data downloads from the query page, and preventing the Query Data button from being active when no data is available for query. Enhancements to the Data Administration User interface include adding review process functionality and workflows, multiple improvements to form fields, and changes to submission options for forms.

Issues Addressed in this Release – RISE Website

Issue #	Issue Title	Issue Description and Resolution
98	Limit all filters to only show filter options that we have data for (e.g. don't show State=Alabama if we don't have any locations in Alabama).	Adjusted filter behavior in the catalog and query to hide unused filter options. Filters now only appear if at least one dataset is associated with the filter value. This prevents a single filter selection from giving no results. However, filters options do not adjust further if multiple filters are applied, so it is possible to apply multiple filters and get no results.
110	Improve error handling for data downloads	Added messages to JSON and CSV download files when the query returns no results.
169	Fix Captcha on Contact Us page	Fixed multiple issues with Captcha that were preventing it from working correctly.
354	Catalog - Items With no Data Associated Should Not Have the Query Button Enabled	Prevented time series items with no data associated with them from showing up in the catalog and disabled the Query Data button from the item details page for items with no data. Item details pages for time series items with no data can still be accessed by typing in the URL into the browser.

Issues Addressed in this Release – RISE Data Administration User Interface

Issue #	Issue Title	Issue Description
239	Build functionality to carry out review process for Records, Items, Locations, and Parameters	Added Data Administration roles and associated permissions and workflows to implement the review process for adding records, items, locations, parameters, and managed vocabulary entries. Data Creators are able to create new records, items, locations, parameters, but the must be reviewed by a RISE Data Administrator before they can become available on the RISE website. New managed vocabulary entries can be added as needed, but are sent to RISE Data Administrators for review.
304	Bug in Form for User to Add/Edit Catalog Records	Added ability to generate a record title from other field entries.
306	Form for User to Add/Edit Locations - Selecting Related Locations	Added ability to select a parent location and add related locations to locations.
307	Form for User to Add/Edit Locations - After Form Submission	Modified submission options to provide options for "Save and Add Another" and "Save" when creating new locations and "Update" and "Delete" when editing existing locations.
315	Record Tags Selected Drop-Down or Manually	Added typeahead capability to the tags field. Users can start typing a tag and tags will appear for selection. Multiple tags can be added.
316	Catalog Record Location Should be a Drop Down	Added typeahead capability to the location field. Users can start typing a location name and locations will appear for selection.
317	Catalog Record Status Should Not be Shown on the Form	Made the Record Status field only editable by RISE Data Administrators. Data Creators can see the field but cannot edit it.
322	Add/Edit Parameters	Modified submission options to provide options for "Save and Add Another" and "Save" when creating new parameters and "Update" and "Delete" when editing existing parameters.
323	Add/Edit Catalog Records - Additional	Modified submission options to provide options for "Save and Add Another" and "Save" when creating new records and "Update" and "Delete" when editing existing records.

Issue #	Issue Title	Issue Description
324	Add/Edit Catalog Items - Additional	Added short names for disclaimers so that full disclaimer text would not need to be displayed in the selection menu. Also replaced abbreviated item types with full item types in the item type selection menu.
325	Data Admin UI - Reorder Fields	Reordered fields in the Add Record, Add Item, Add Location, and Add Parameter forms and adjusted field titles and instructions.
326	Add/Edit Catalog Items – Publication Date	Eliminated the requirement in the Publication Data field to include a time and provided instructions for situations when only a year or only a month and year are known.
327	Add/Edit Catalog Items - Form Submission Change	Modified submission options to provide options for “Save and Add Another” and “Save” when creating new items and “Update” and “Delete” when editing existing items.
363	Rename "Add Contacts" in the Data Admin UI to "Add Entity"	Renamed Contact to Entity throughout, except where Data Contact was the intended meaning.
365	Saving Blank Fields as Null in Database	Changed behavior of forms to store blank values as nulls instead of empty strings.
368	Change IPs to User Friendly URLs	Changed the URLs associated with the RISE data and content administration Drupal pages to memorable URLs rather than IP addresses.
402	Increase Data Upload Limit and Add Message to Page	Increased the file upload size limit from 2 MB to 20 MB and added explanatory text to the field indicating size limit.
