

RISE Release 2.1.1

October 26, 2020

Release Description

RISE Release 2.1.1 is a patch release. It addresses 4 issues, including three bug fixes on the RISE website and one enhancement to the Data Administration User Interface. Bugs that were fixed on the RISE website included a problem with the contact form, missing filter options on the catalog and query pages, and poor performance on the catalog and query pages. The enhancement to the Data Administration User Interface increased the character limit on certain fields.

Issues Addressed in this Release – RISE Website

Issue #	Issue Title	Issue Description and Resolution
427	Not Receiving Contact Form Emails	Fixed an issue that was preventing the contact form from sending emails.
429	Filter Options Missing	Fixed an issue that prevented the filters on the catalog and query pages from showing all available filter options.
431	Slow Query on Catalog Records	Fixed an issue with database queries that caused slow filter and search on the catalog and query pages.

Issues Addressed in this Release – RISE Data Administration User Interface

Issue #	Issue Title	Issue Description
449	Increase character limit on source codes	Increased the maximum number of characters for sourceCode, locationSourceCode, parameterSourceCode, modelNameSourceCode, and modelRunMemberSourceCode from 45 to 255 characters.
