

RISE Release 2.14.5

November 19, 2024

Release Description

RISE Release 2.14.5 is a patch release. It includes one bug fix to the code for the Reservoir Conditions visualizations. The bug fix corrects the calculation method for the percent of average.

Issues Addressed in this Release

RISE Website – Reservoir Conditions Visualization (publicly accessible)

Issue #	Issue Title	Issue Resolution
1330	Fix Reservoir Conditions Issue with Percentage of Average - INC000000270329	Corrected the calculation for the average reservoir storage to use historical reservoir storage values for the specified date rather than all historical reservoir storage values. In addition, the process for generating the teacup diagrams was modified to update the average reservoir storage values once per week. All historical reservoir conditions maps were regenerated using the corrected calculation.
