

RISE Release 2.15.7

July 2, 2026

Release Description

RISE Release 2.15.7 is a minor release covering 1 ticket. The ticket implements Drupal Masquerade functionality for the RISE Data Admin UI to replace username/password login for test accounts, allowing authorized users to log in with their AD credentials and securely masquerade as assigned test accounts for role-based testing.

Issues Addressed in this Release

Data Admin UI

Issue #	Issue Title	Issue Resolution
#1546	Implement Masquerading for Passwordless Authentication on Current Local Test Accounts	Drupal Masquerade functionality for the RISE Data Admin UI was implemented to replace username/password login for test accounts to support compliance with DOI's requirements for security control IA-5(1), which requires authentication through the enterprise MFA solution. Authorized users can now log in with their AD credentials and securely masquerade as assigned test accounts for role-based testing, with configurable account assignments, activity tracking, audit logging, permission enforcement, and clear identification of masqueraded actions throughout the RISE Data Admin UI.
